Resource originally created in English

WORKSHOP DIRECTIONS

1 Introduction

Microsoft Office Online is a suite of online applications that lets you create Word documents, Excel spreadsheets, and more. You can store the documents you create—plus any other files you want—on **Microsoft OneDrive**, an online file storage service. Both of these tools are accessible from anywhere with an Internet connection, and both are **free**.

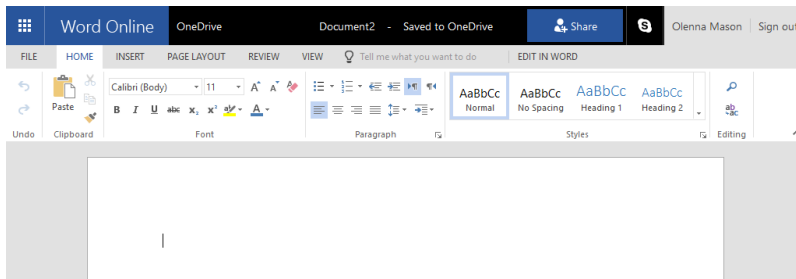

In this lesson, you'll learn more about the features and advantages of **Office Online** and **OneDrive**. You'll also get an idea of what to expect from the rest of this tutorial.

OneDrive was previously known as SkyDrive; Office Online was previously known as Office Web Apps. You may occasionally see references to SkyDrive and Office Web Apps while using these services.

2 What is Office Online?

Office Online is a free basic version of the most popular programs in the Microsoft Office suite. It lets you create Word documents, Excel spreadsheets, and more without having to buy or install software. There are four Office Online apps:

- **Word:** For creating text documents
- **Excel:** For working with spreadsheets
- **PowerPoint:** For creating presentations
- **OneNote:** For taking and organizing notes

You don't need to install anything on your computer to use Office Online. Instead, you work with it **online** using a service called **Microsoft OneDrive**.

3 What is OneDrive?

OneDrive is a free online storage space you can use as **your own personal online hard drive**. When you create a document with Office Online, it will be saved to your OneDrive. You can store other files there as well. This type of online storage is referred to as **the cloud**. Because Office Online and OneDrive are based in the cloud, you can access them from any device with an Internet connection at any time.

Review our lesson on [Understanding the Cloud](#) to learn more about the basics of cloud computing.

Once you've used Office Online and OneDrive to store files in the cloud, you can **edit and share** them without ever having to download them to your computer. You can also **upload files** from your computer, including photos and music. You can even **sync your computer and OneDrive** so any changes you make to your files are automatically copied between the cloud and your computer. As you can see below, working with the cloud makes all of these things possible.

To use Office Online and OneDrive, you'll need a **Microsoft account**. Getting a Microsoft account will also give you access to features like **email and instant messaging**.

4 Why use Office Online and OneDrive?

OneDrive is one of the most popular cloud storage services available today, offering **five gigabytes (5GB)** of free storage space. And because OneDrive allows you to **share and edit** documents with Office Online, it's easy to collaborate with others.

Of course, Office Online and OneDrive aren't the only services that let you create and store files in the cloud. **Google Drive** and Apple's **iCloud** provide similar features. However, Office Online offers one **major advantage** over these other services: It is **similar** to the desktop versions of Microsoft Office applications. If you already know how to use these applications, it will be easy for you to start using Office Online. Also, Office Online and the regular Office applications use the same **file types**. This means you can edit the same file in both Office Online and the desktop version.

5 Limitations of Office Online

While Office Online is a useful tool, it's not perfect. Office Online is a limited version of Microsoft Office, which means it may be **missing** some of the features you like to use. You can still create documents, spreadsheets, and presentations, but they may not look as polished without certain tools.

For example, here are the page layout tools in Word Online:

Here are the page layout tools in Word 2016:

As you can see, the desktop version includes several additional features. Still, if you can't afford to purchase the full version of Microsoft Office, Office Online is a great (and free) **alternative**. Keep in mind that you need to have access to the Internet to use Office Online and OneDrive. If your Internet connection is unreliable, you may want to keep copies of important files on your computer as well.
